Deploy
REVIEW
STAGING
PRODUCTION
Deploy a Play Application to the cloud

Development Mode

play run

Application running on http://localhost:9000

Development Mode

play run

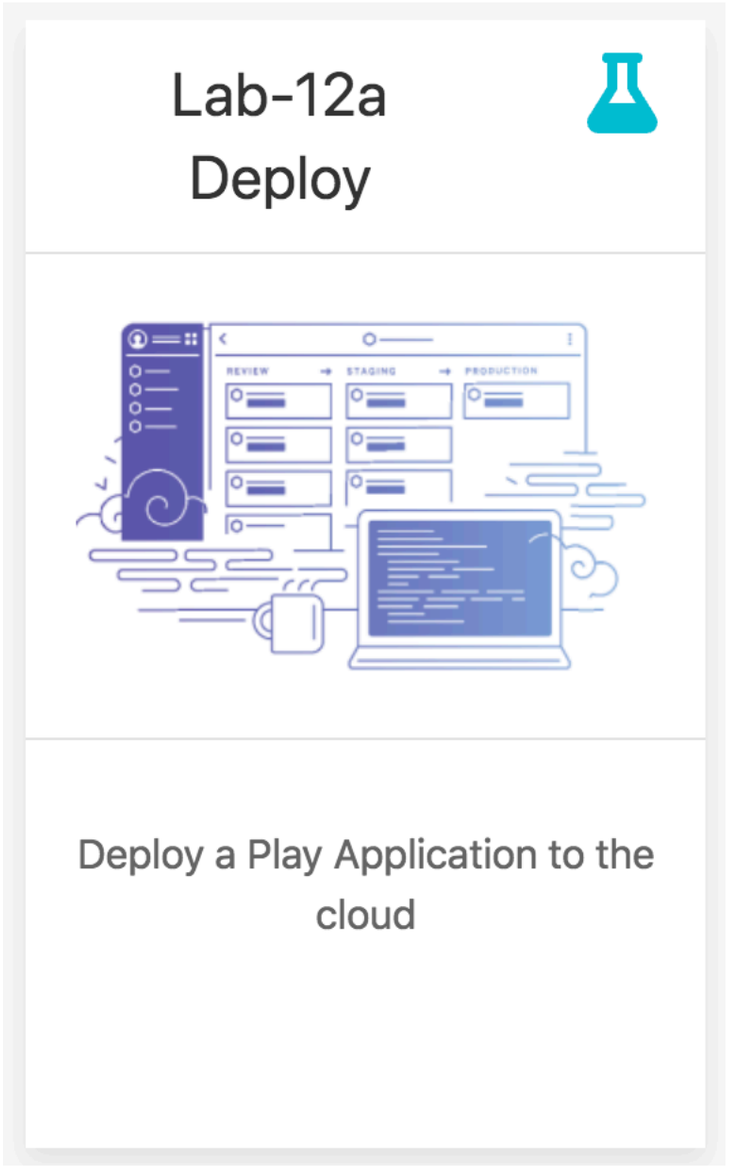
Database visible on
http://localhost:9000/@db

https://en.wikipedia.org/wiki/Software_deployment

> **Software deployment** is all of the activities that make a software system available for use.
>
> The general deployment process consists of several interrelated activities with possible transitions between them.

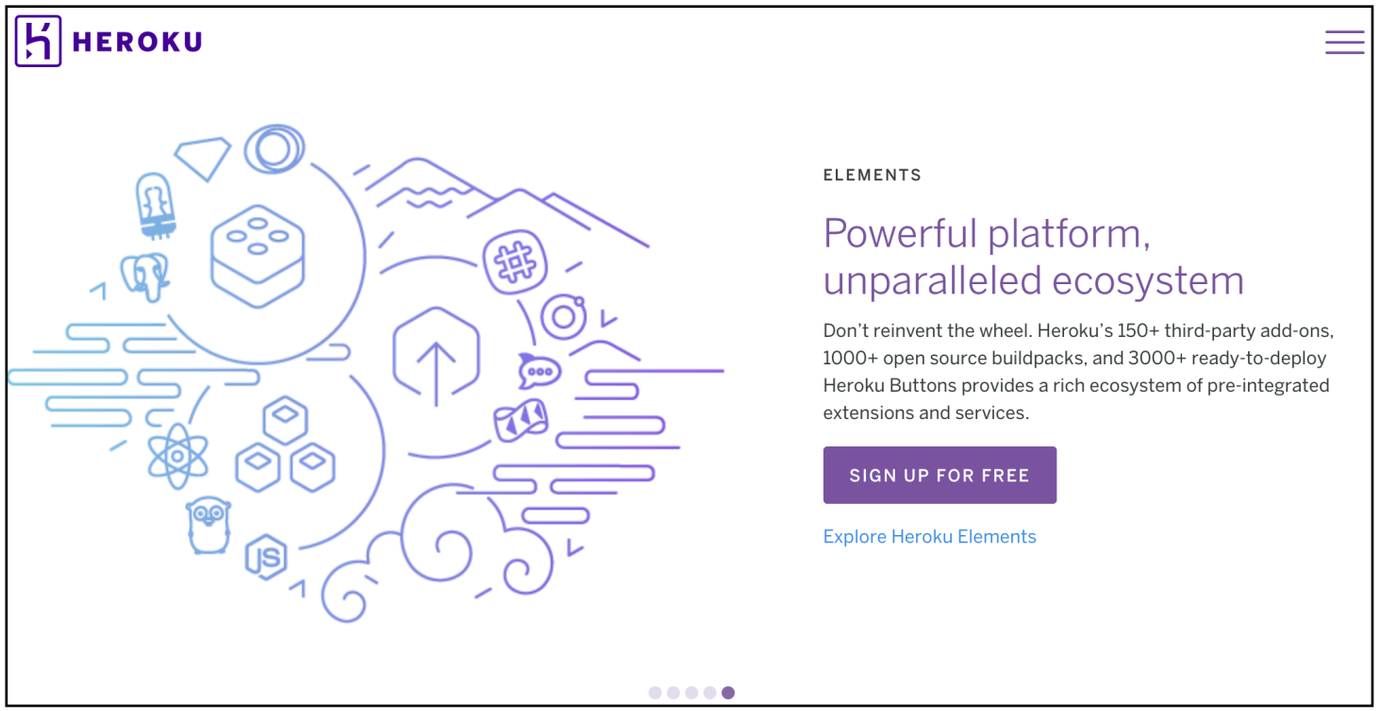
Transition from *Development Mode* to *Production Mode*

Deploying a Play Application

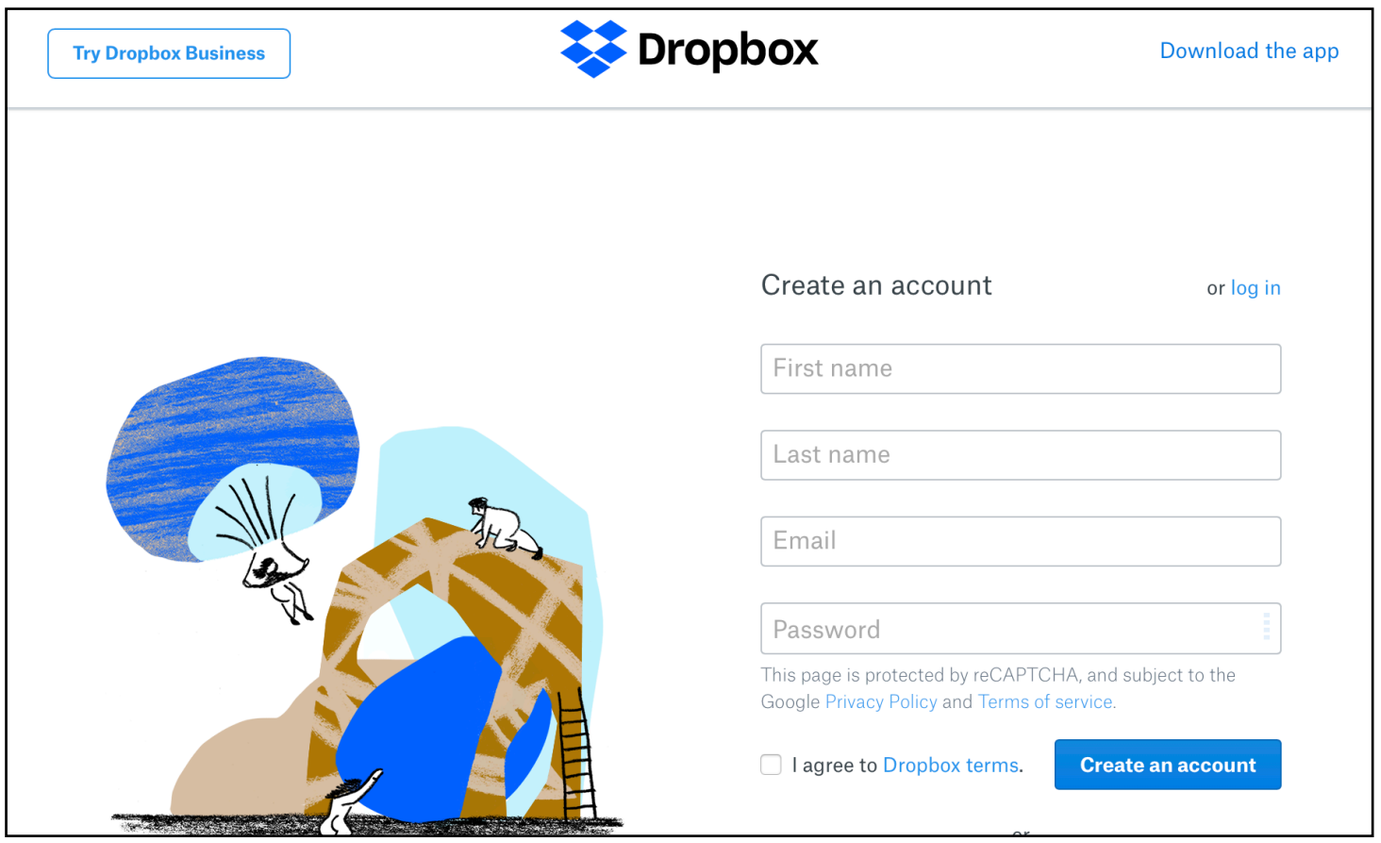


Deployment: Platforms & Tools

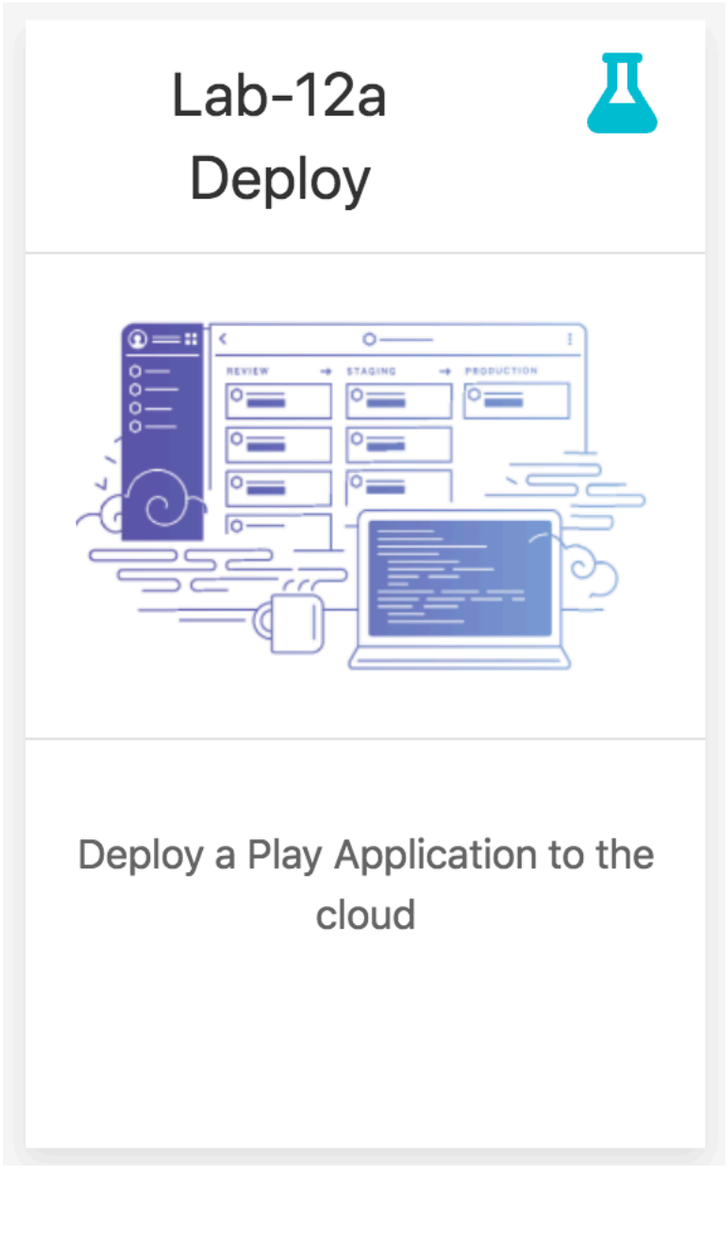
Heroku: Application Service Provider



Dropbox: Cloud File Sharing service



Deploying a Play Application



1.Configuration

Three Key Configuration Parameters

1.1- JDK Version
1.2- Play Version
1.3- Database Connection String

1-1. JDK Version

1.Configuration

https://devcenter.heroku.com/articles/java-support

Heroku supports multiple versions of the JDK

Supported Java versions

Heroku currently uses OpenJDK 8 to run your application by default. OpenJDK versions 9 and 7 are also available. Depending on the major version you select the latest available update of that JDK will be used each time you deploy your app.

Current default versions are:

- Java 7 - `1.7.0_171`
- Java 8 - `1.8.0_161`
- Java 9 - `9.0.4`
- Java 10 - `10`

Place this file in project root:

system.properties

```
java.runtime.version=8
```

1-2. Play Version

1.Configuration

https://www.playframework.com/download#alternatives

Play Application Framework Versions

1.5 Setup Instructions

play-1.5.0.zip	Sep 29 2017	79M

1.4 Setup Instructions

play-1.4.5.zip	Sep 29 2017	74.6M
play-1.4.4.zip	Jan 24 2017	73.1M
play-1.4.3.zip	Aug 16 2016	72.3M

Show all versions

Edit existing file:

conf/dependencies.yml

```
# Application dependencies

require:
    - play
```

```
# Application dependencies

require:
    - play 1.5.0
    - org.postgresql -> postgresql 42.2.2:
        force: true
```

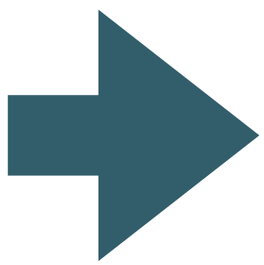
1-3. Database Connection String

1.Configuration

Edit existing file:

conf/application.conf

```
db.default=mem
```



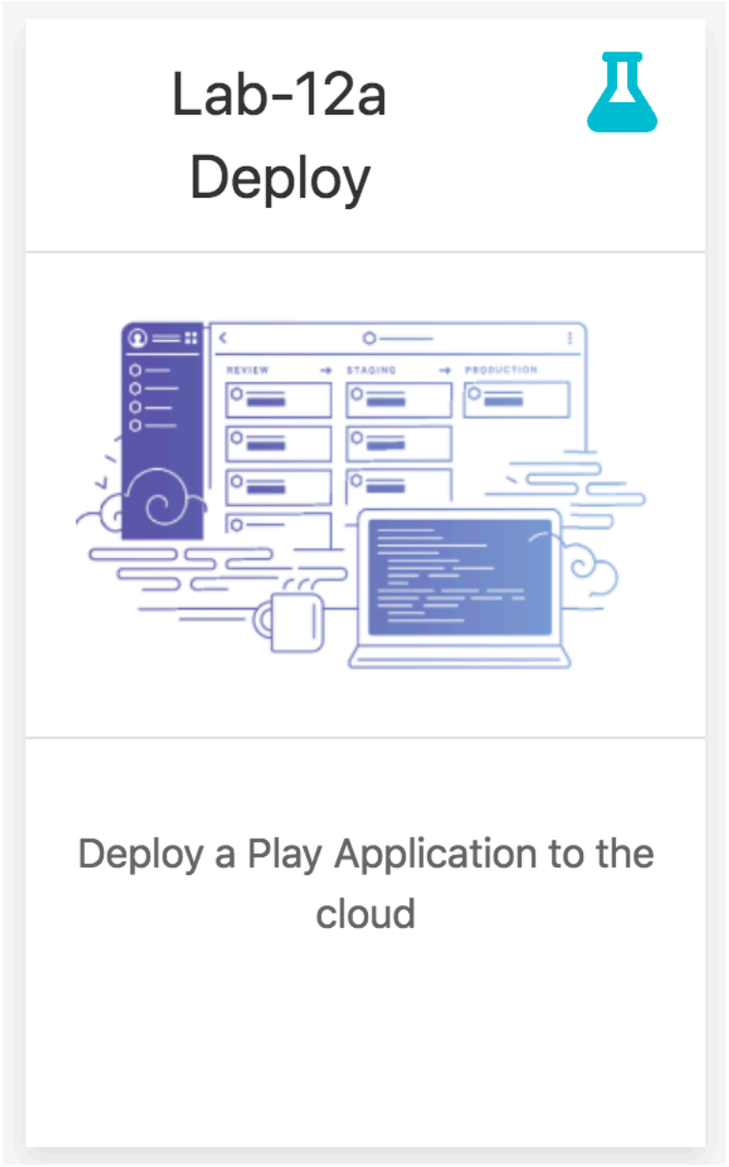
```
# db.default=mem

db=${DATABASE_URL}
jpa.dialect=org.hibernate.dialect.PostgreSQLDialect
jpa.ddl=update
```

Dev mode
Application
connected to in
memory database

Production Mode
Application connected to
Postgres Database,
specified by platform

Deploying a Play Application



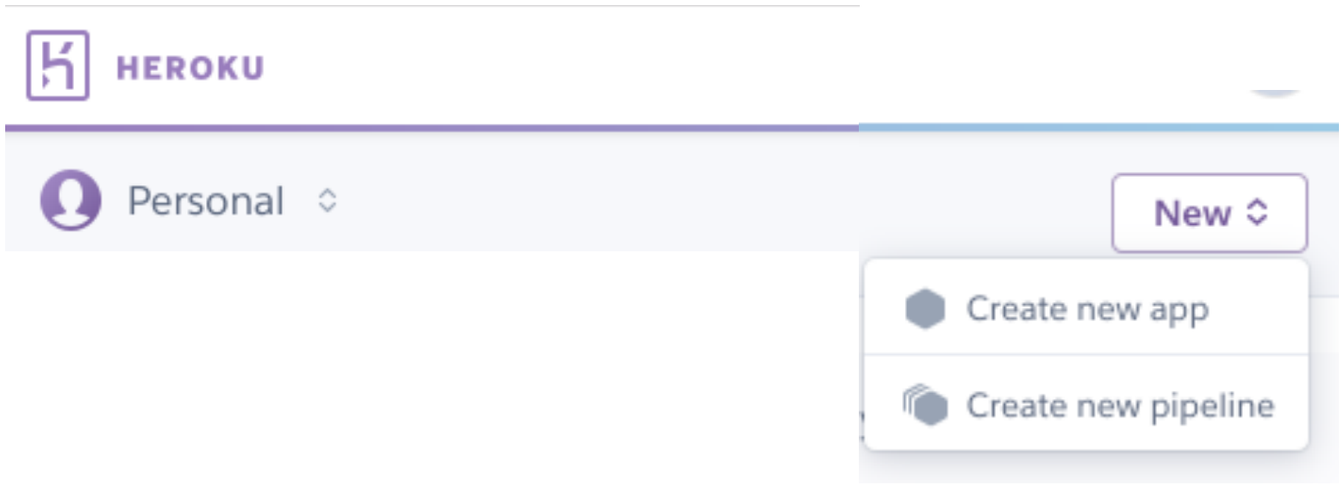
2.Staging

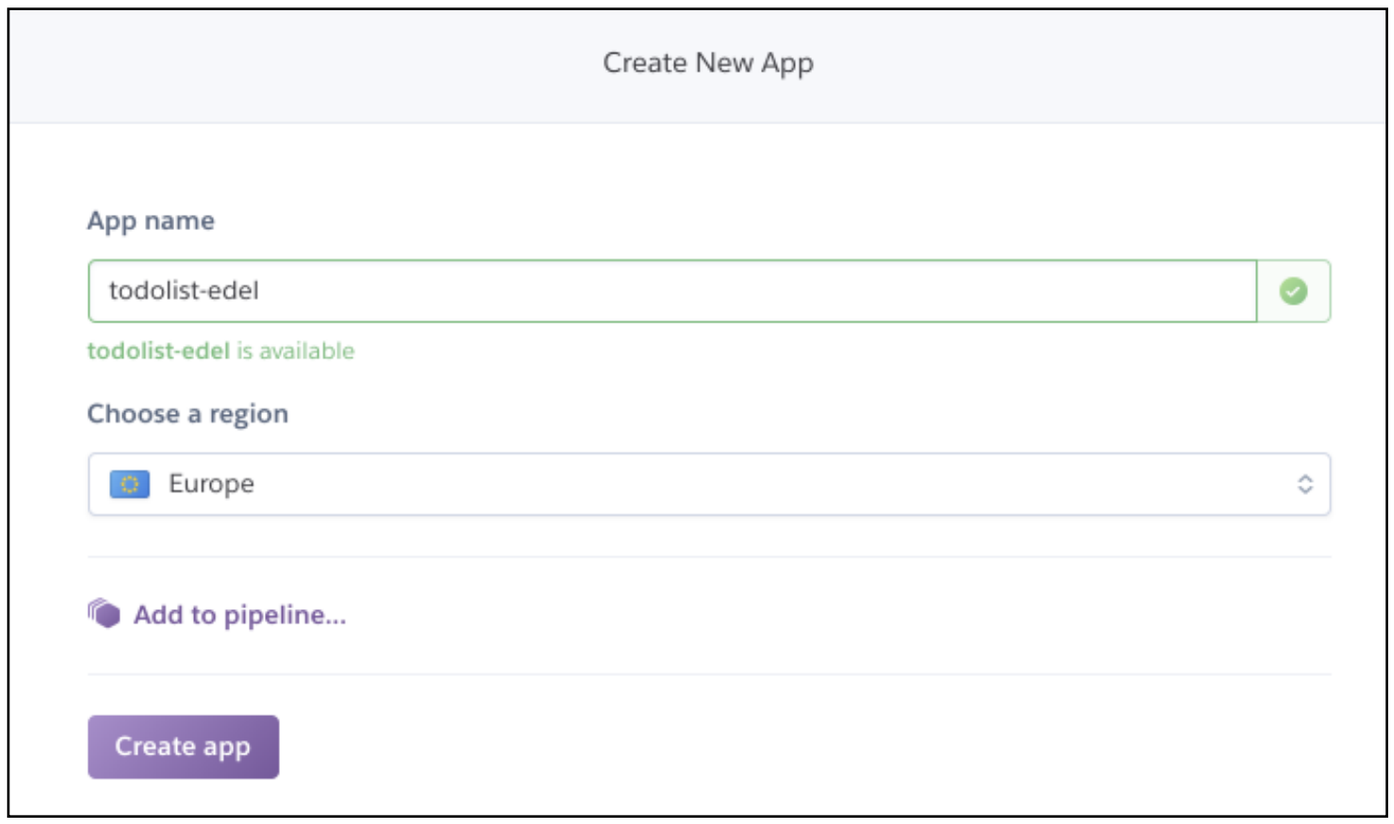
Three Processes:

2.1- Create the Application
2.2- Connect to Dropbox
2.3- Copy project to dropbox
2.4- Configure Play Build pack

2.1- Create Application

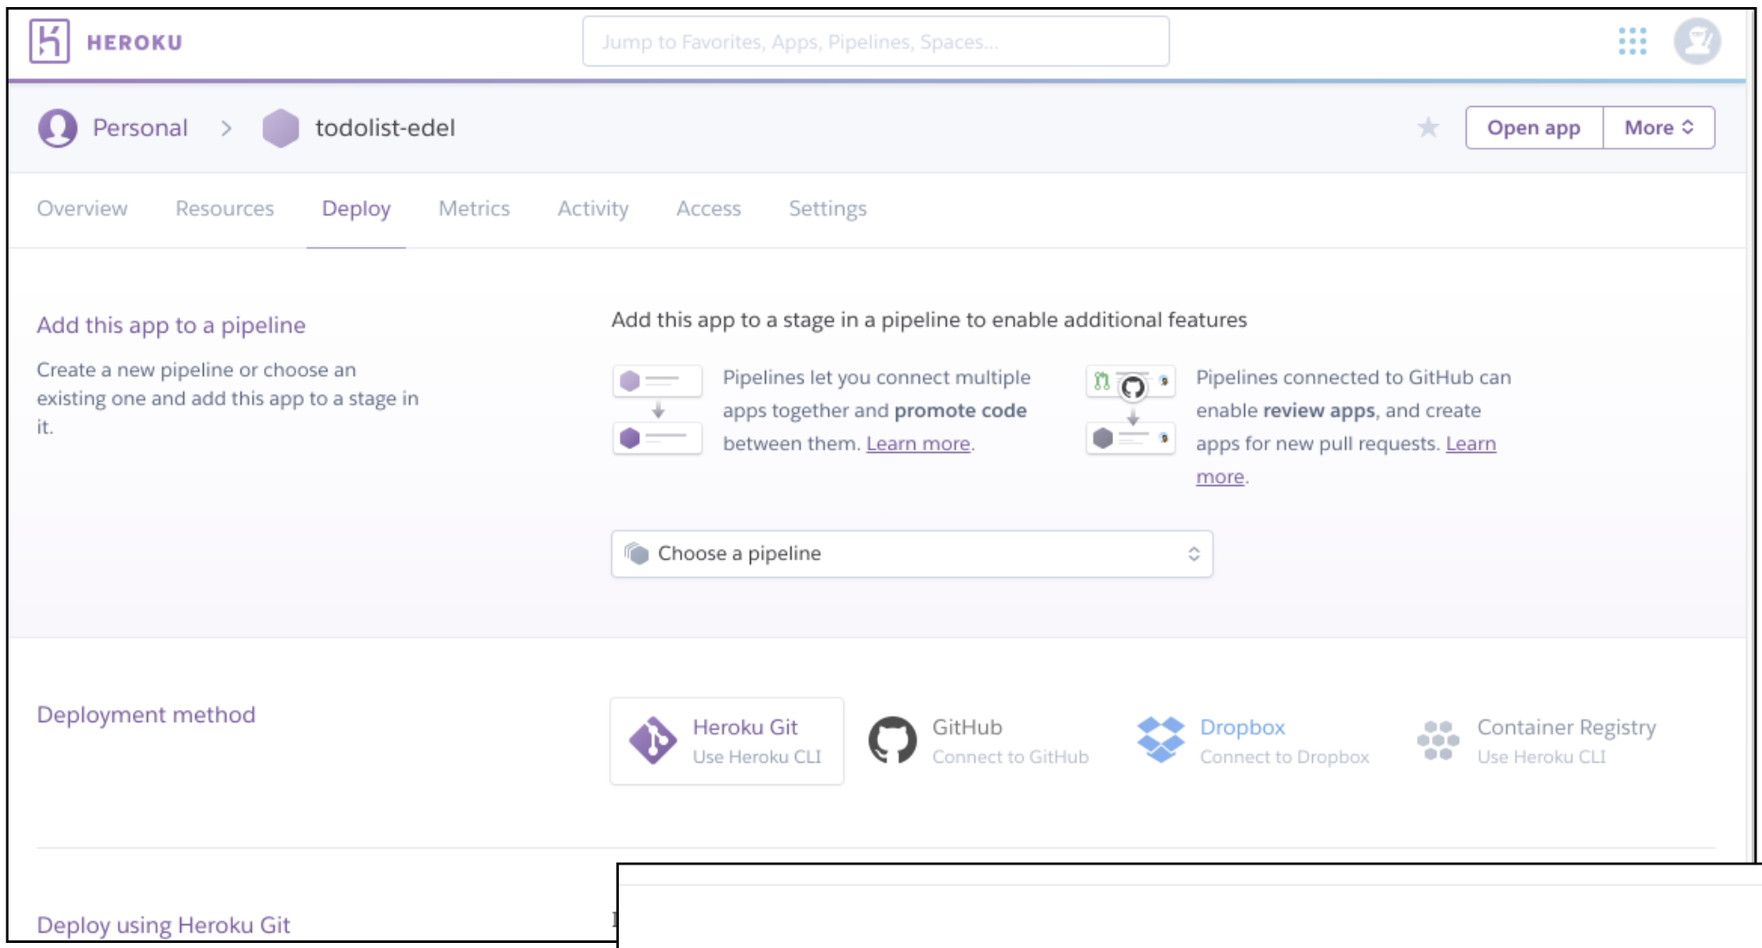
2.Staging

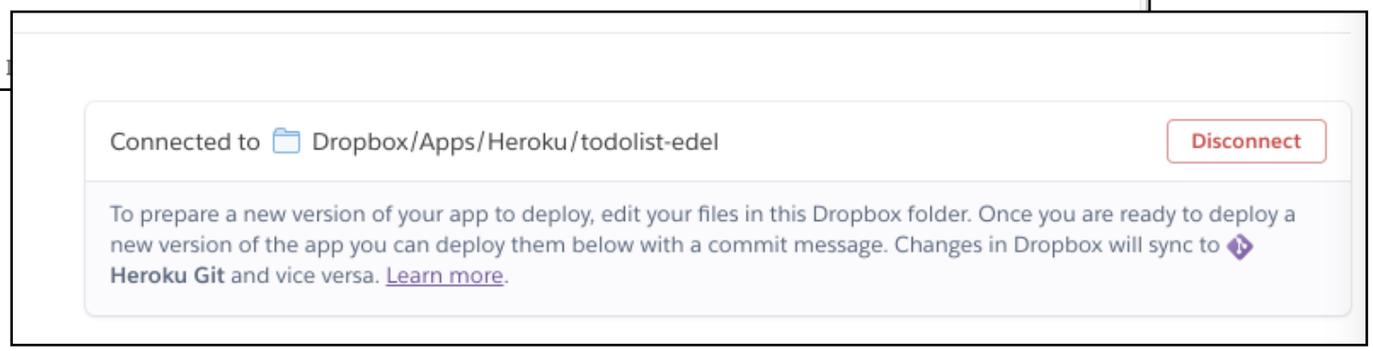




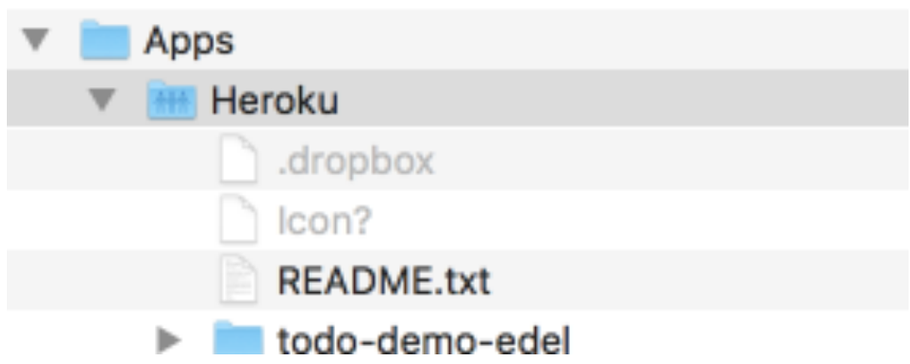
2.2- Connect to Dropbox

2.Staging



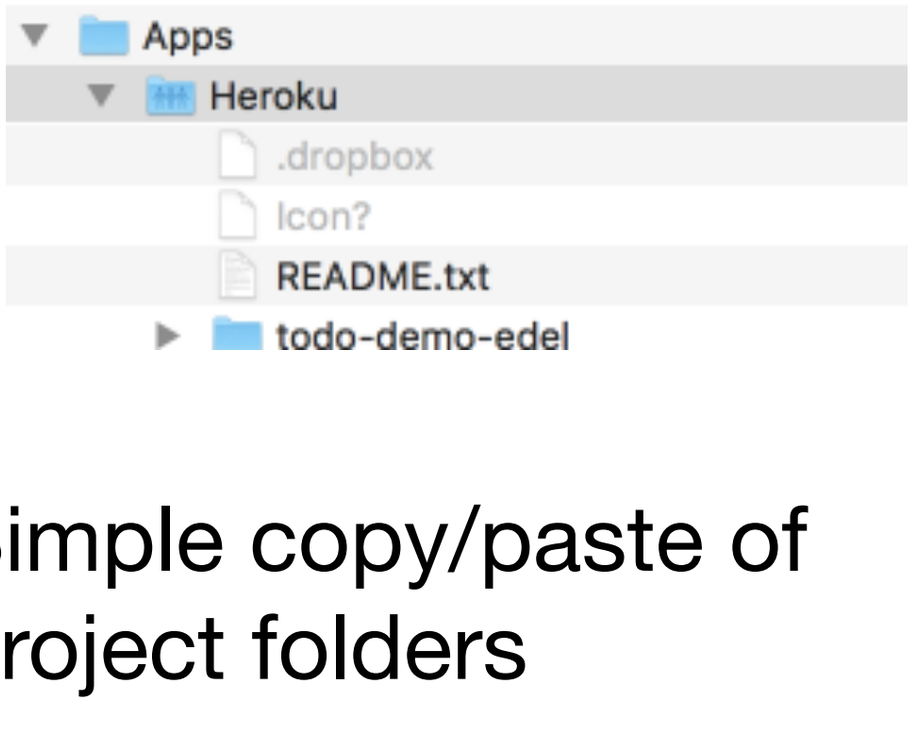


Create an empty folder on dropbox for the project



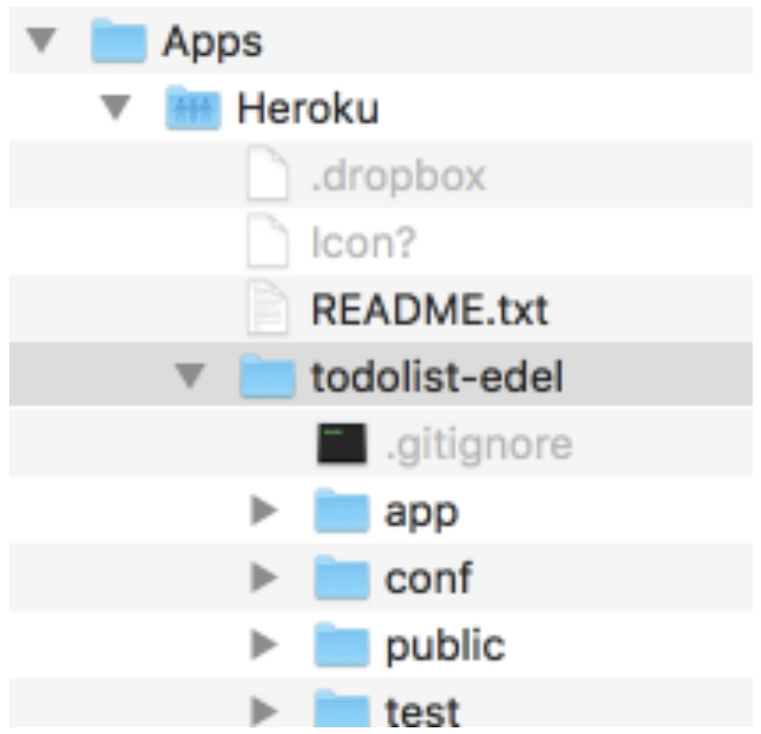
2.3- Copy project to dropbox

2.Staging



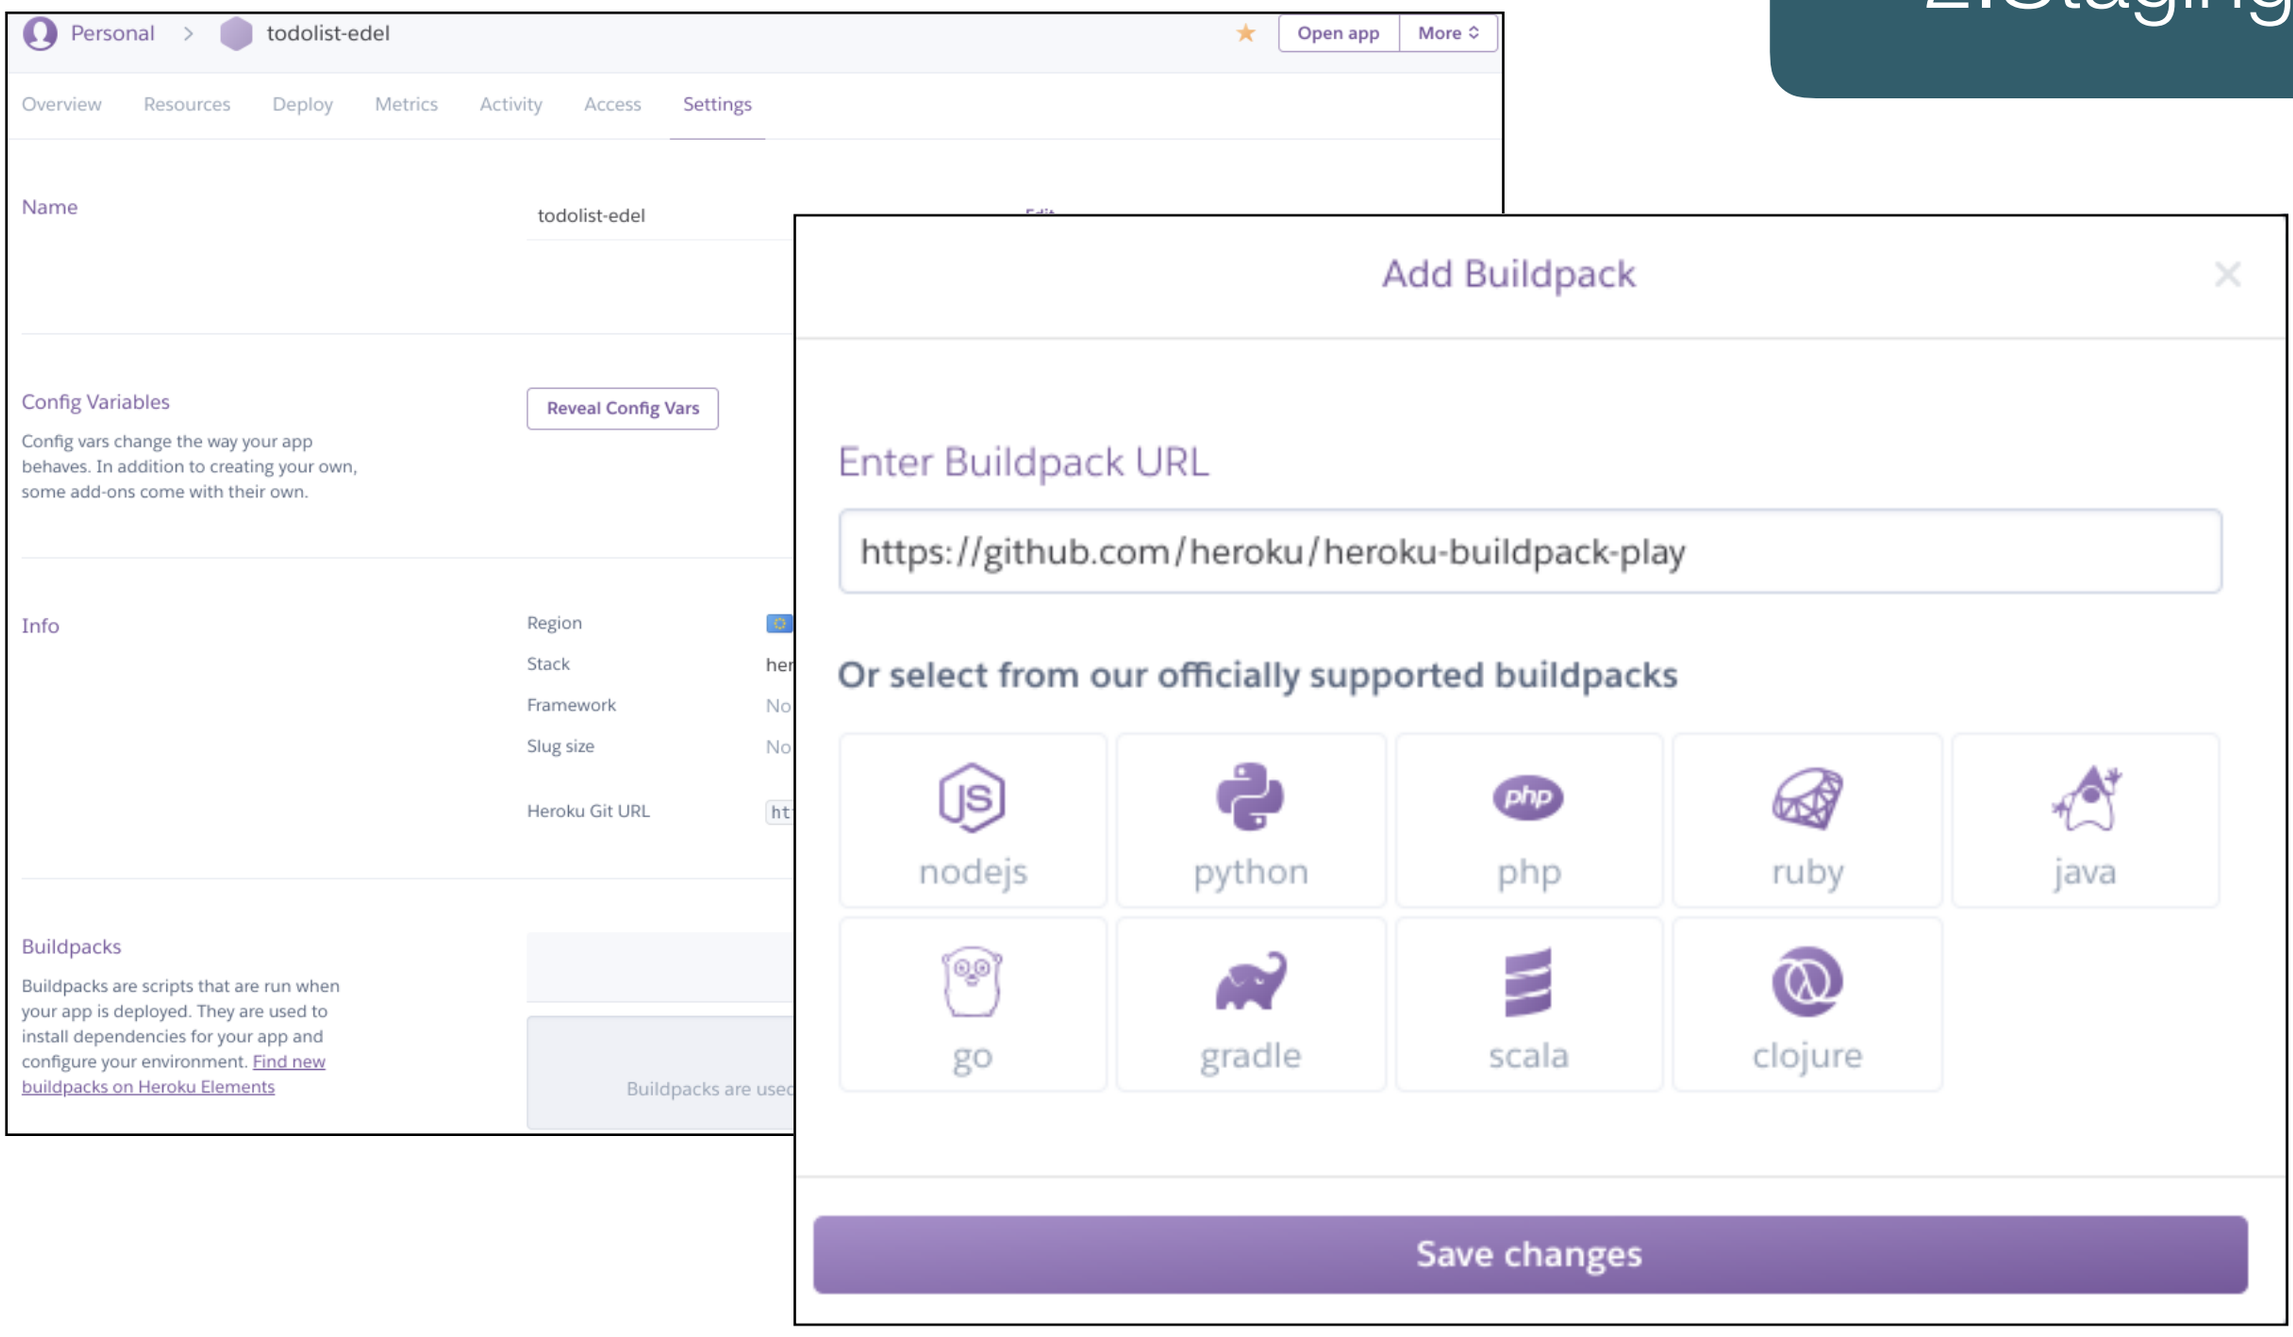
Simple copy/paste of project folders

- app
- conf
- public
- test



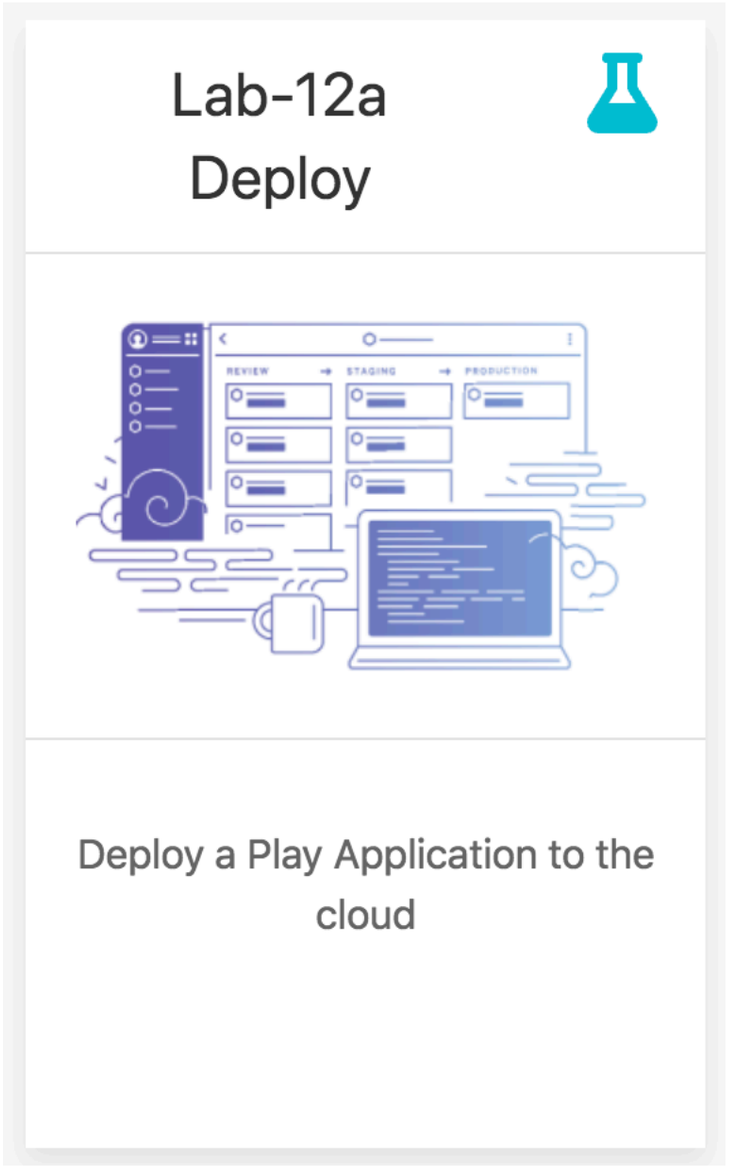
2.4- Configure Build Pack

2.Staging



Instructs Heroku that the application is a Play Framework app.

Deploying a Play Application



3.Deployment

Two Processes:

3.1- Build & Deploy
3.2- Monitor

3.1- Build

3. Deployment

Deploy your latest changes

Add a commit message to tell others what you've changed.

Pushed from Dropbox

Deploy

Receive code from Dropbox

Build app Hide build log

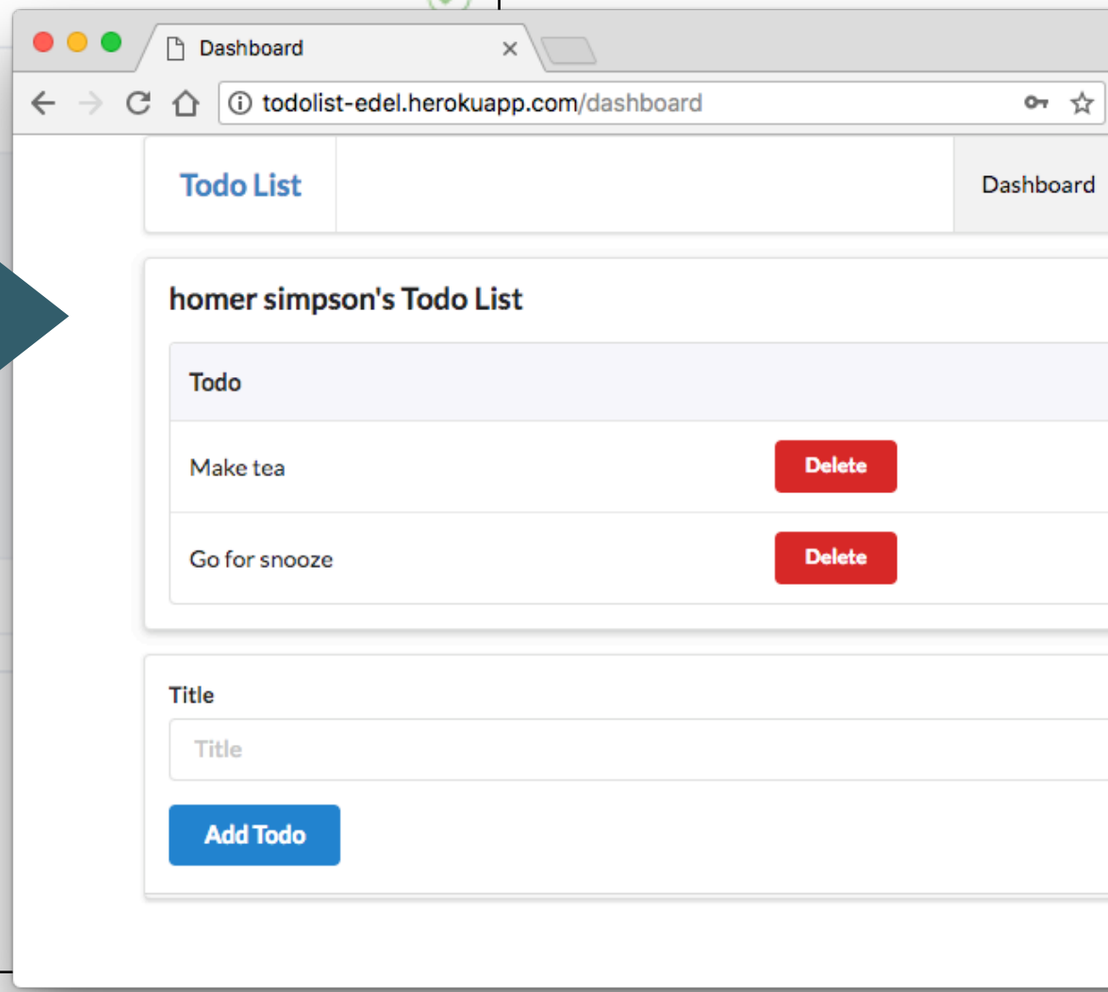
```
-----> Discovering process types
       Procfile declares types     -> (none)
       Default types for buildpack -> web
-----> Compressing...
       Done: 89.8M
-----> Launching...
       Released v5
       https://todolist-edel.herokuapp.com/ deployed to Heroku
```

Build finished

Deploy to Heroku

Your app was successfully deployed.

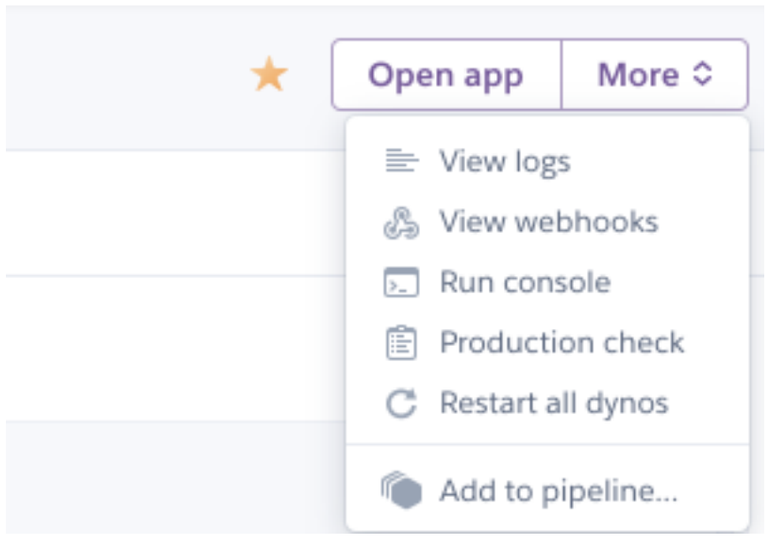
Manage App View



Deploy button copies the dropbox folder, builds & launches the app

3.2- Monitor - Application Console

3. Deployment



Replicates the Console visible when the app is running on localhost

Application Logs
