

Exercise on VPC

Follow the steps provided on the tutorial document "*Getting started with AWS VPC*" and complete the following tasks.

Exercise 1

- When you have created your own VPC, relevant Security groups and launched a WebServer and a DBServer instance then you should take screenshots of the following:
 - Route Table for your Public subnet. [**screenshot1**]
 - Route Table for your Private subnet. [**screenshot2**]
 - NAT Gateway details [**screenshot3**]
 - Once you ssh from your webserver instance (or Bastion host if you have configured one) to your dbinstance you have checked your public IP address using `wget http://ipinfo.io/ip -qO -` - Take [**screenshot4**] of the execution of this command and the address returned.

Upload to Moodle

- Please upload either a single PDF containing the 4 screenshots requested in order or else a ZIP archive containing the 4 images. Please do not upload Word documents or RAR files. If a zip archive, then please name the individual files as *screenshot1*, *screenshot2*, *screenshot3*, *screenshot4* with appropriate extension (.png, .gif, etc). There is no need for any accompanying text or explanation.
