

Forms Design

(using Semantic-UI)

Sonatas

Song	Artist	
Opus 23	Beethoven	Delete Song
Opus 33	Beethoven	Delete Song

Title	Artist
<input type="text"/>	<input type="text"/>
<input type="button" value="Add Song"/>	

Form to Add a Song

Title	Artist
<input type="text"/>	<input type="text"/>
<input type="button" value="Add Song"/>	

Title Artist

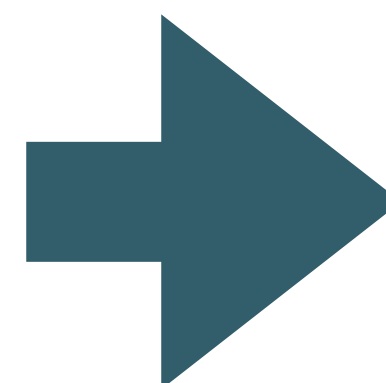

Add Song

```
<form class="ui stacked segment form" action="/playlist/{{playlist.id}}/addsong" method="POST">
  <div class="two fields">
    <div class="field">
      <label>Title</label>
      <input placeholder="Title" type="text" name="title">
    </div>
    <div class="field">
      <label>Artist</label>
      <input placeholder="Artist" type="text" name="artist">
    </div>
  </div>
  <button class="ui blue submit button">Add Song</button>
</form>
```

The image shows a UI form segment with a raised border. It contains two text input fields, one labeled 'Title' and one labeled 'Artist', positioned side-by-side. Below these fields is a blue button with the text 'Add Song'.

```
<form class="ui stacked segment form" action="/playlist/{{playlist.id}}/addsong" method="POST">  
  <div class="two fields">  
    <div class="field">  
      <label>Title</label>  
      <input placeholder="Title" type="text" name="title">  
    </div>  
    <div class="field">  
      <label>Artist</label>  
      <input placeholder="Artist" type="text" name="artist">  
    </div>  
  </div>  
  <button class="ui blue submit button">Add Song</button>  
</form>
```

`class="ui stacked segment form"`

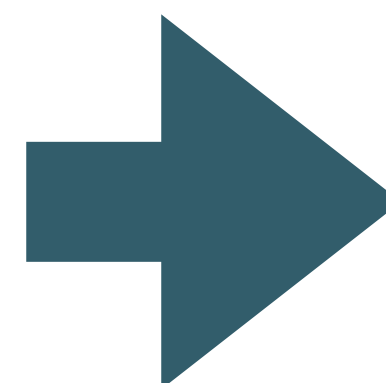

A form segment with
a raised border

UI rendering of the form. It features a rounded rectangular container. At the top, the labels "Title" and "Artist" are centered above their respective input fields. Below the input fields, a blue button with the text "Add Song" is centered.

```
<form class="ui stacked segment form" action="/playlist/{{playlist.id}}/addsong" method="POST">
  <div class="two fields">
    <div class="field">
      <label>Title</label>
      <input placeholder="Title" type="text" name="title">
    </div>
    <div class="field">
      <label>Artist</label>
      <input placeholder="Artist" type="text" name="artist">
    </div>
  </div>
  <button class="ui blue submit button">Add Song</button>
</form>
```

`class="two fields"`

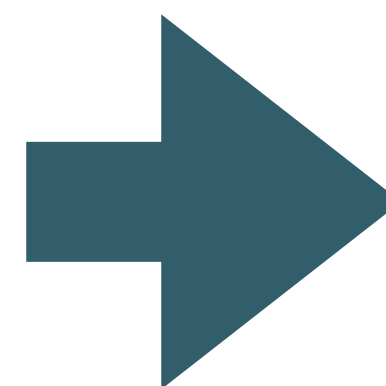

Layout 2 fields
on a single row

The image shows a UI form with two text input fields. The first field is labeled 'Title' and the second is labeled 'Artist'. Below the fields is a blue button labeled 'Add Song'.

```
<form class="ui stacked segment form" action="/playlist/{{playlist.id}}/addsong" method="POST">
  <div class="two fields">
    <div class="field">
      <label>Title</label>
      <input placeholder="Title" type="text" name="title">
    </div>
    <div class="field">
      <label>Artist</label>
      <input placeholder="Artist" type="text" name="artist">
    </div>
  </div>
  <button class="ui blue submit button">Add Song</button>
</form>
```

`class="field"`

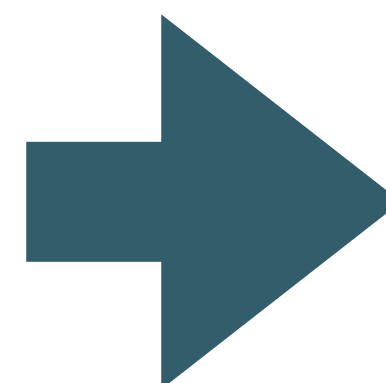

Stretch, centre and align a single field to hold 'title'

A visual representation of a form with two input fields and a submit button. The first field is labeled "Title" and the second is labeled "Artist". Both fields contain their respective placeholder text. Below the fields is a blue button labeled "Add Song".

```
<form class="ui stacked segment form" action="/playlist/{{playlist.id}}/addsong" method="POST">
  <div class="two fields">
    <div class="field">
      <label>Title</label>
      <input placeholder="Title" type="text" name="title">
    </div>
    <div class="field">
      <label>Artist</label>
      <input placeholder="Artist" type="text" name="artist">
    </div>
  </div>
  <button class="ui blue submit button">Add Song</button>
</form>
```

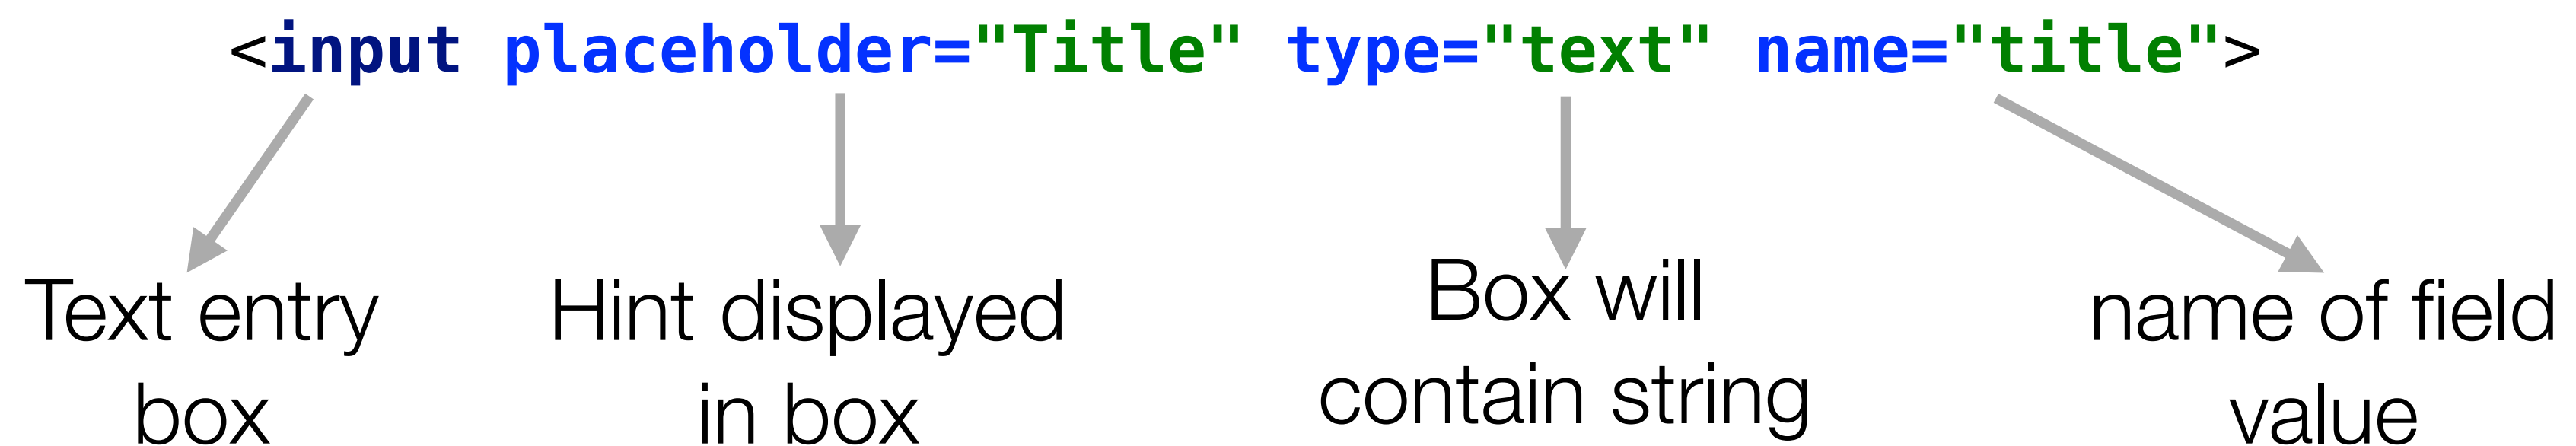

`<label>Title</label>`

Name of the field

The image shows a UI form with two text input fields. The first field is labeled 'Title' and has a rounded rectangular border. The second field is labeled 'Artist' and has a standard rectangular border. Below the fields is a blue button with the text 'Add Song'.

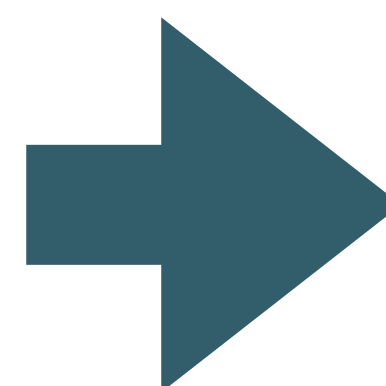

```
<form class="ui stacked segment form" action="/playlist/{{playlist.id}}/addsong" method="POST">  
  <div class="two fields">  
    <div class="field">  
      <label>Title</label>  
      <input placeholder="Title" type="text" name="title">  
    </div>  
    <div class="field">  
      <label>Artist</label>  
      <input placeholder="Artist" type="text" name="artist">  
    </div>  
  </div>  
  <button class="ui blue submit button">Add Song</button>  
</form>
```

The image shows a UI form with two text input fields. The first field is labeled 'Title' and the second is labeled 'Artist'. Below the fields is a blue button labeled 'Add Song'.

```
<form class="ui stacked segment form" action="/playlist/{{playlist.id}}/addsong" method="POST">  
  <div class="two fields">  
    <div class="field">  
      <label>Title</label>  
      <input placeholder="Title" type="text" name="title">  
    </div>  
    <div class="field">  
      <label>Artist</label>  
      <input placeholder="Artist" type="text" name="artist">  
    </div>  
  </div>  
  <button class="ui blue submit button">Add Song</button>  
</form>
```

`class="field"`

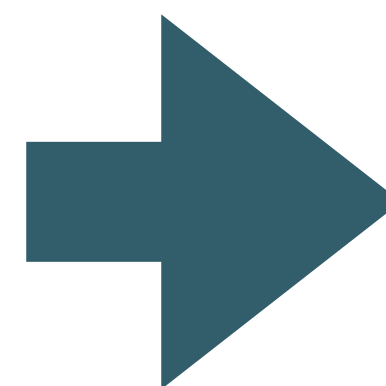

Stretch, centre and align a single field to hold 'artist'

The image shows a form with two input fields. The first field is labeled 'Title' and the second is labeled 'Artist'. Below these fields is a blue button with the text 'Add Song'.

```
<form class="ui stacked segment form" action="/playlist/{{playlist.id}}/addsong" method="POST">
  <div class="two fields">
    <div class="field">
      <label>Title</label>
      <input placeholder="Title" type="text" name="title">
    </div>
    <div class="field">
      <label>Artist</label>
      <input placeholder="Artist" type="text" name="artist">
    </div>
  </div>
  <button class="ui blue submit button">Add Song</button>
</form>
```

`class="ui blue submit button"`

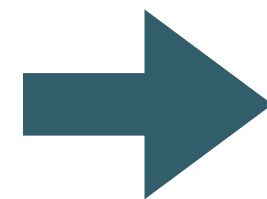

Single button which will 'submit' the form contents

Title Artist

Add Song

```
<form class="ui stacked segment form" action="/playlist/{{playlist.id}}/addsong" method="POST">
  <div class="two fields">
    <div class="field">
      <label>Title</label>
      <input placeholder="Title" type="text" name="title">
    </div>
    <div class="field">
      <label>Artist</label>
      <input placeholder="Artist" type="text" name="artist">
    </div>
  </div>
  <button class="ui blue submit button">Add Song</button>
</form>
```

`action="/playlist/{{playlist.id}}/addsong" method="POST">`

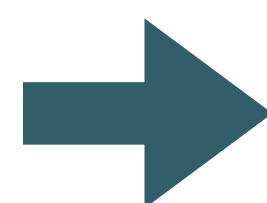

The **action** specifies the route which will be triggered when the 'submit' button is pressed

Title Artist

Add Song

```
<form class="ui stacked segment form" action="/playlist/{{playlist.id}}/addsong" method="POST">
  <div class="two fields">
    <div class="field">
      <label>Title</label>
      <input placeholder="Title" type="text" name="title">
    </div>
    <div class="field">
      <label>Artist</label>
      <input placeholder="Artist" type="text" name="artist">
    </div>
  </div>
  <button class="ui blue submit button">Add Song</button>
</form>
```

`action="/playlist/{{playlist.id}}/addsong" method="POST">`

The HTTP Method used to transmit the form data (we will always use 'POST')

Playlists

Sonatas

Delete Playlist

Concertos

Delete Playlist

Title

Add Playlist

Form to Add a Playlist

Title

```
<form class="ui stacked segment form" action="/dashboard/addplaylist" method="POST">  
  <div class="field">  
    <label>Title</label>  
    <input placeholder="Title" type="text" name="title">  
  </div>  
  <button class="ui blue submit button">Add Playlist</button>  
</form>
```

action → **"/dashboard/addplaylist"**

field value → **name="title"**
